Programming Assignment 21 - DatabasePHP Application using Wamp Server

Create DatabasePHP application to implement basic database operations. Refer following figure to implement.

When each link is clicked a PHP need to invoke to get the necessary input from the user to perform the operations. Create Database option retrieves the database name for which database has to be created and creates the database. Similar case is applied for creating the table also. For the insertion, deletion, updation and listing of records, PHP retrieves the information about the database and the table and execute the necessary operations.
