

HTML5 – Audio Video Support

HTML – Audio Element

- Before HTML5, there was no standard for playing audio files on a web page.
- The HTML5 <audio> element specifies a standard way to embed audio in a web page.

Example

```
<audio controls>
```

```
  <source src="horse.ogg" type="audio/ogg">
```

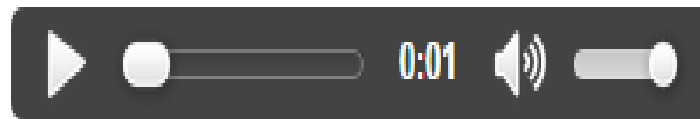

```
  <source src="horse.mp3" type="audio/mpeg">
```

Your browser does not support the audio element.

```
</audio>
```

...Contd

- The **controls** attribute adds audio controls, like play, pause, and volume.
- Text between the <audio> and </audio> tags will display in browsers that do not support the <audio> element.
- Multiple <source> elements can link to different audio files. The browser will use the first recognized format.

HTML – Video Element

Example

```
<video width="320" height="240" controls>  
  <source src="movie.mp4" type="video/mp4">  
  <source src="movie.ogg" type="video/ogg">  
  Your browser does not support the video tag.  
</video>
```

- **controls** attribute adds video controls, like play, pause, and volume.
- Include **width** and **height** attributes.
- If height and width are not set, the browser does not know the size of the video.
- Text between the <video> and </video> tags will only display in browsers that do not support the <video> element.
- Multiple **<source>** elements can link to different video files. The browser will use the first recognized format.

Output
