Programming Assignment 20 - Implementation of Opinion polling using Webservice

Write web service ***Opinion*** to connect with the database to retrieve the opinion about any given product. Write a web service client to consume the ***Opinion*** service to get the opinion for the given product. Create a database product with the details of the product, namely, its id, name and the quality. The quality attribute can take the values of *Good* or *Fair*. Populate the table with 20 records. Refer the following snapshot to design web service client.
