Internet Programming Lab – CS6512
Programming Assignment 1 - Personal Website Creation using HTML & CSS
_____

Develop the personal website using the basic HTML tags namely, frameset, frame, image, anchor, list and table tags as shown below. Develop html pages for each of the links. The second vertical frame should be loaded with the home.html once when the site is rendered. Further, that frame will have to be loaded with the html files when the corresponding links are clicked. Photo gallery should display a set of images. Fix three hot spots in every image. Show the related information when the hotspots are clicked. Use image map tag for implementing photo gallery.

The links.html will have a set of links whose pseudo class selectors have to be used to define styles for them. (use embedded style)

The style for the **Personal Website-XXX** has to be inline

The html files corresponding to the links should use the styles background-color green and text color pink. (use external style sheet)

Use alternate style sheet to view the contents of web page for the visually impaired with styles letters separated and bigger font.
